Please note that the licensing terms can change at any version. Unless you have a special agreement, it remains unaffected by future license changes for you.

3 Installation Requirements

- The .NET Framework 4.5 is required.

4 Installation

There are several ways to install the software. The most common method is the installation using the graphical user interface of the setup routine.

4.1 Installation using the graphical user interface setup

To properly install the software, simply run the setup.exe file and follow the prompts of the installation routine. It is recommended not to adjust the default installation path.

4.2 Unattended installation

To "still" or unattended (unattended / silent) to install this software, you simply pass the setup file the necessary start parameters. Important: In silent mode, you agree to the license terms. These are not displayed during the unattended installation.

For unattended installation:

setup.exe /S

setup.exe /D=C:\Program Files (x86)\AlternativeDirectory

installer.exe /NCRC /S /D=C:\Program Files (x86)\AlternativeDirectory

/NCRC Disables the use of the CRC checksum

/S Starts the installation in silent mode

/D Sets a different installation directory

5 Uninstallation

5.1 Uninstalling from the Uninstall.exe

To uninstall, go to the program directory of the application and run the uninstall.exe

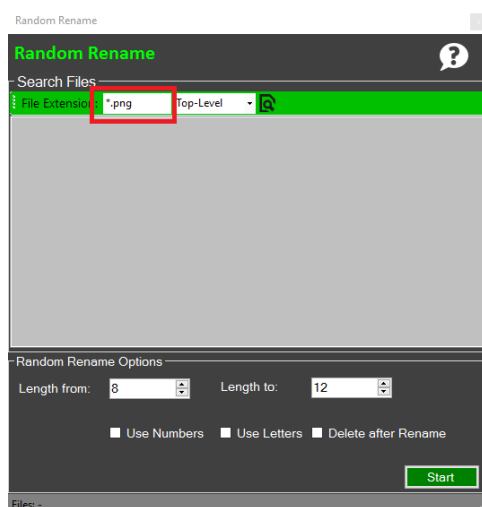

5.2 Silently uninstalling

All switches / parameters of the installation work even during uninstallation. Start the application silently uninstall the uninstall.exe with the parameter / S.

6 Use

The software is divided into 2 areas. The upper portion "Search Files" helps you select the files to rename. The lower portion "Random Rename Options" determines the way in which your files are renamed. To familiarize yourself with the function, it is recommended that a "test order" with to create "test files". Thus, they reduce the risk of errors.

6.1 Select files to rename

In the upper part of the software allows you to search your computer for files. There are in the green bar Toolbox 2 settings. You can search for files after a certain file extension. For example, according to PNG files.

To use a file extension filter, type in the File Extension text box the file extensions (See Figure 1).

Figure 1: File Extension filter

Do you want to consider all file extensions, simply use the preconfigured Setting (*. *). In the drop down box you can set whether only the folder you want to consider selecting want to search (top-level) or all subdirectories (recursive).

By default, only the files are included in the specified folder.

In order to select files, then click the Browse icon . Thereupon a dialog open, you must select a folder. All files in this folder will now be added to the list.

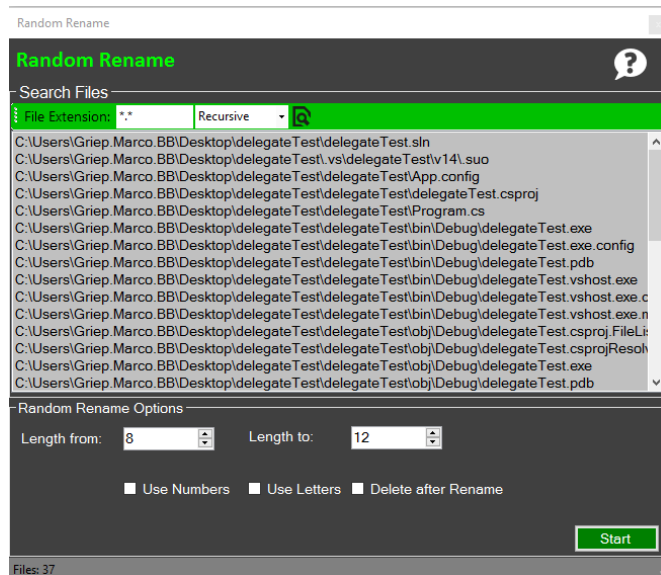

Figure 2: Selected files

6.2 Make renaming settings

Once the files are selected, you can determine the scheme for your files to be renamed. The two number fields "Length from" and "Length to" determine the number of characters of the filename. By default, the random file name is therefore 8-12 characters long. If you want, for example, have a file name of the still 5 is Stellig, set both values. 5

The 3 checkboxes at the bottom of the settings define whether characters and / or letters may occur in random names. For example, to the have the filename only display numeric values. Select only "Use Numbers".

You can mix numbers and letters also with each other.

The checkbox "Delete after Rename" determines whether the Original files should be retained or deleted before renaming. By default, no and help prevent accidental data loss deletes this application the original files. This has that after renaming you have to follow each file 2 times in the folder. Put the check mark for "after Delete Rename" the original files will be deleted and you have only the renamed files.

6.3 Start processing

The renaming of files, you can just start clicking the green button "Start" in the. Depending on the number of files can take quite a while, especially if they also rename files in the subfolders of this process. Just wait for the final report.

7 Files Directories

The software does not create any files

8 Troubleshooting & Logfiles

The software does not create any logfiles
